

6 April 1978

MEMORANDUM FOR: [REDACTED]

ITS-W Network Manager

25X1A

FROM: [REDACTED]

Chief, Special Security Center

SUBJECT:

Imagery Transmission System -
Washington (ITS-W)

REFERENCE:

ITS-W Security Policy and Procedures
7 March 1978

1. The security procedures as outlined in reference have been reviewed and found to meet the general requirements for the transmission and receipt of SCI information. The following comments and recommendations are offered for inclusion in these procedures.

a. Establish ITS-W Station 11, as the central reference point for clearance verification by the other terminal users.

b. Permit the use of a [REDACTED] access approval for the terminal operators or other users of the equipment for the initial receipt of any [REDACTED] information. After receipt of such information, it should be the responsibility of the terminal manager to ensure it is distributed on a need to know basis and to provide appropriate storage.

2. It is requested that all terminal managers be informed of the above prior to the date the system is to become operational. If we can be of any further assistance in this matter, please advise.
